

NEW PROJECT

Nurse +

Help to fund an extra nurse at a clinic in Africa

Did you know that:

- There is only 1 nurse for every 2,500 people in Rwanda or 1,430 people in Uganda, compared to an average in the whole of Africa of 1 for every 900 people.
- Nurses in Africa not only provide general health care, advice and immunisation, they are increasingly involved in HIV/Aids treatment.

We have been successfully working on projects in partnership with Clinics in Rwanda and Uganda for many years. They would dearly love to add another nurse to their team so that they could make a greater impact not only in caring for those attending the clinic, but also in the community to prevent malnutrition, improve hygiene and treat those suffering from TB and HIV/Aids

As this project involves employment CHI intends to provide funding for at least one year. Obviously we would hope to continue for much longer. Would you or your group be prepared to make a regular payment (any sum) or a single donation towards this project? It may even be something that your church or work colleagues would like to get involved with.

As part of the **Nurse +** scheme the nurse would write to supporters three times a year to let them know how things are going, the joys, the challenges and the prayer needs. Supporters would, if they wished, be able to write back.

What will it cost? Well if 31 people committed just £6 per month we could provide a nurse. Could you help us support one or even two!!

We are really excited about this project so if you want to make a donation or if you are interested but want to know more, please email us or contact the office.
